

MAINTENANCE ORIENTED ASSET MANAGEMENT SYSTEM FOR AMUSEMENT PARKS

PREVENTIVE MAINTENANCE
SCHEDULING

INSPECTIONS MANAGEMENT

KPI MEASURING, FOR
DECISION SUPPORT

SPARE PARTS MANAGEMENT

● **ASSET LIVE**
COMMUNICATION

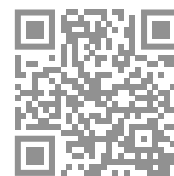

FLUIDDESIGNLAB.COM

Unixon is a system designed to **assist the amusement parks** technical, operation and finance teams for the asset management, from the monitoring to the inventory, the capitalization, the costing and the **maintenance and inspections**.

The system is developed into the amusement industry, based on the **Auxel experience in the rides automation and maintenance**.

One of the Unixon key feature, that makes it an unique product, is the capability of the **connection to the assets** (including but **not limiting to the amusement rides**), in order to read alarms and events, to store them, to calculate KPIs and to notify or report the park personnel.
